

portland stone - naturally

ALBION STONE

15-18 Lime Street, London EC3

Architect/Designer:
Buckly Grey Yeoman

Client:
Forum House

Main Contractor:
Blenheim House Construction

Location:
City of London

Portland Stone:
**Jordan's Whitbed and Bowers
Basebed**

Scope of Project:
**Construction of new Portland
stone building with two
additional floors.**

Situated in the 'insurance triangle' close to the modern landmarks of Lloyd's and the Gherkin, the major reconstruction and extension of Forum House offers occupiers well-placed and prestigious City offices.

The work included a new central core and two new floors to create a 55,000 sq ft building. The existing building's original facades of limestone and glazed brick are retained with modern, glazed infills and new natural Portland Stone detailing and full-height glazing to the rooftop extension.

The ground and basement floors

were also remodelled to provide reception, office and retail space. The perfect reception combines an impressive image with a warm welcome for visitors and staff alike. Forum House, with its limestone and granite entrance, is designed to accommodate precisely that balance.

Albion Stone produced 15m³ of stone in the form of cladding, cills and jambs in Portland Jordans Whitbed and Bowers Basebed.

This project was awarded a Gold award by the City of London Considerate Contractors Scheme in their Annual Code of Practice Awards Ceremony 2008.
