ALBION STONE

25 Moorgate, London EC2

Architect/Designer:

Foggo Associates

Client:

Grosvenor Developments

Main Contractor:

Laing

Location:

City of London

Portland Stone:

Bowers Whitbed

Scope of Project:

**Construction of new
Portland stone
building.**

Situated in a prominent location in the City, Foggo Associates developed detailed plans to encompass Portland Stone clad façades, to complement existing buildings and adhere to planning constraints, whilst creating an impressive building suitable for such a position.

The design team visited Albion's Quarry and works to review the control samples prior to selecting Bowers Whitbed for its aesthetic characteristics.

Technical Data was then reviewed to ascertain the durability and a testing programme was established to ensure the best quality stone

was used on the project.

Albion Stone manufactured the stone for the Columns in the Portland Factory, which were then transported to Malling Products Limited in Essex to be incorporated into a precast panel.

Before any cutting schedules or manufacturing programmes were prepared, sample panels were constructed for final approval by the Design Team.

The project was completed in the Summer of 2002. Albion Stone supplied approximately 30m³ of finished stone and over 150m³ of raw block for the project.
